DETAILED ACTION

Claim Objections

Claim 27 is objected to because of the following informalities: Claim 2 depends from canceled claim 24. For the purposes of examination, claim 24 will be treated as depending form claim 22. Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 22, 23 and 26-27 are rejected under 35 U.S.C. 102(b) as being anticipated by Nichols (US 6,712,181).

Nichols discloses cable clamp system having a tension member (24) for suspending the loads and a termination device for the tension member, the termination member including:

a first compressive system (44,46) to provide a first retaining mechanism; and a second compressive system (60) comprising a clamp engaging the tension member (24), the second compressive system prevents further slippage of the tension member by mechanical deformation of the tension member only when slippage of the tension member through the device first occurs (col. 3, 40-55). With regard to the preamble of claim 22, "An elevator system having a tension member for suspending the elevator loads", as broadly recited, Nichols discloses that his device can be used to hold fast when weighted (col. 1 ll. 10-14).

Application/Control Number: 10/684,171

Art Unit: 3654

In regards to claim 23, Nichols discloses the tension member engagement with the first compressive system defines a load side (54) and a cut side (52) of the tension member, and wherein the clamp (60) is engaged with the cut side (52) of tension member.

In regards to claims 26, Nichols discloses the clamp (60) includes a first portion (first sleeve), a second portion (second sleeve) and a fastener (portion connecting the sleeve) engaged with both portions to provide a clamping force between the two portions to retain the tension member.

In regards to claim 27, Nichols discloses the clamp is located to be drawn toward the first compressive system in the case of slippage of the tension member relative to the first compressive system (col. 3, 40-55).

Claims 22, 23 and 25-26 are rejected under 35 U.S.C. 102(b) as being anticipated by Mardis (US 2,189,671).

Mardis discloses cable clamp system having a tension member (9) for suspending the loads and a termination device for the tension member, the termination member including:

a first compressive system (2,4,6) to provide a first retaining mechanism; and a second compressive system (18) comprising a clamp engaging the tension member (9), the second compressive system prevents further slippage of the tension member by mechanical deformation of the tension member only when slippage of the tension member through the device first occurs (p. 1 ll. 40-50). It is inherent that when slippage occurs, the u-bolts 18 will dig into the rope 9 and cause mechanical deformation. With regard to the preamble of claim 22,

Application/Control Number: 10/684,171

Art Unit: 3654

"An elevator system having a tension member for suspending the elevator loads", as broadly recited, Mardis discloses that his device can be used to secure an end of the rope.

In regards to claim 23, Mardis discloses the tension member engagement with the first compressive system defines a load side (4) and a cut side (near 18) of the tension member, and wherein the clamp (18) is engaged with the cut side of tension member.

In regards to claim 25, Mardis discloses the clamp includes a first portion (18, Fig. 5) and a second portion (3, Fig. 5), the first portion including grooves and the second portion including ridges that complement the grooves such that upon application of the clamping force the interaction of the grooves and ridges retain the tension member.

In regards to claims 26, Mardis discloses the clamp includes a first portion (18, Fig. 5), a second portion ((3, Fig. 5) and a fastener (15) engaged with both portions to provide a clamping force between the two portions to retain the tension member.

In regards to claim 27, Mardis discloses the clamp is located to be drawn toward the first compressive system in the case of slippage of the tension member relative to the first compressive system.

Response to Arguments

Applicant's arguments with respect to claims 22, 23 and 25-27 have been considered but are most in view of the new ground(s) of rejection. The limitation, the second compressive system prevents further slippage of the tension member by mechanical deformation of the tension member only when slippage of the tension member through the device first occurs, necessitated the new grounds of rejection.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Evan H. Langdon whose telephone number is (571)272-6948. The examiner can normally be reached on M-F 8:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Peter Cuomo can be reached on (571) 272-6856. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
